

TcHmiReadLatestAlarm

This sample is a JS Code Behind file that shows how to read the latest alarm from the TC3 Eventlogger. This provides the possibility, to display the latest alarm in a Textblock in the header bar or something else.

You can include this file in any TcHmi Project. The sample requires a Textblock or Textbox, which ID you can change in the following line:

```
var textblock = TcHmi.Controls.get('TcHmiTextblock_LatestEvent');
```

Please follow the comments in the sample.
